

INSULATING WITH WOOD

3 HALF DAY WORKSHOPS

This series of knowledge events, run in partnership with the Natural Fibre Insulation Group, will explore the performance of wood fibre insulation, practical aspects of use, costs and sustainability benefits. Our aim is to support building clients and designers to better understand how to specify and use wood fibre insulation.

Wood fibre insulation has shifted from the eco-fringes into mainstream construction. Available as rigid boards, flexible batts and loose, the products have been proven to perform in new build and retrofit markets to insulate walls and roofs. As wood fibre insulation is made from the sawmill residue of spruce trees, manufacturing is also a strategic opportunity for Wales.

This event is targeted at social housing professionals involved in design and specification of new build and retrofit programmes and those involved in the low carbon and healthy buildings agendas. This event should also appeal to anyone in the timber construction supply chain.

FREE TO ATTEND FOR WOODKNOWLEDGE WALES MEMBERS £25 FOR NON-MEMBERS
